Declaration on Cobalt content

in printed circuit boards supplied by Würth Elektronik GmbH & Co KG Circuit Board Technology

Printed circuits supplied by Würth Elektronik GmbH & Co KG do not contain cobalt,

products with hard gold plated surfaces excepted

The cobalt content in the hard gold-coated areas is < 1 %, it serves the best possible coating hardness, thus contributes to the product's longevity according to Würth Elektronik's product compliance concept of sustainability.

Due to this very small ratio, a traceability of the supply chain according to RMI CRT and comparable initiatives is not expedient.
