Goods directly on the customer's site for withdrawal	<ul style="list-style-type: none"> <li>Security of supply</li> </ul>
Würth Elektronik can provide a draft agreement.	

## Traceability

### Data Matrix code

How can you tell the origin of individual circuit boards?

Identification of each circuit board through a Data Matrix code. This is applied by inkjet and includes the information required to ensure the complete traceability of the circuit board in the production process.

### Order tracking

How can you track the current status of your order?

When the goods are shipped, you receive an email with the delivery note attached and a link to track the shipment via the relevant parcel service.

## WEB EDI and EDI connection

### WEB EDI

WEB EDI platforms used include SupplyOn, Pool4Tool, and CleverCure. Customised proprietary programming is also possible. These are used to map master data maintenance, including points of contact and supplier self-assessment, and also the following topics:

- Enquiry/tendering process
- Logistics processes such as orders and order confirmation
- Complaints processing
- Supplier evaluation

### EDI connections

The classic EDI connection currently facilitates „Order“ and „Order confirmation“. Items such as „Delivery forecast“ and „Dispatch advice“ are added in the next step. Virtually all formats and transfer procedures are possible. EDIFACT, IDOC or xml, via FTP or OFTP. The requirements are implemented in conjunction with our partner retarus.

EDI is intended to optimise the business process by directly linking the application systems of suppliers and customers.

#### Benefits:

- Cost and time savings
- Faster flow of information
- Direct communication between different systems
- Avoidance of potential typing errors and their consequences
